DETAILED ACTION

Continued Prosecution Application

1. This application discloses and claims only subject matter disclosed in prior Application No. 10/605,627 (now US Patent 6,802,215) filed 15 October, 2003, and names an inventor or inventors named in the prior application. Accordingly, this application may constitute a continuation, a continuation-in-part or division. Should applicant desire to obtain the benefit of the filing date of the prior application, attention is directed to 35 U.S.C. 120 and 37 CFR 1.78.

Double Patenting

2. The nonstatutory double patenting rejection is based on a judicially created doctrine grounded in public policy (a policy reflected in the statute) so as to prevent the unjustified or improper timewise extension of the "right to exclude" granted by a patent and to prevent possible harassment by multiple assignees. See *In re Goodman*, 11 F.3d 1046, 29 USPQ2d 2010 (Fed. Cir. 1993); *In re Longi*, 759 F.2d 887, 225 USPQ 645 (Fed. Cir. 1985); *In re Van Ornum*, 686 F.2d 937, 214 USPQ 761 (CCPA 1982); *In re Vogel*, 422 F.2d 438, 164 USPQ 619 (CCPA 1970); and, *In re Thorington*, 418 F.2d 528, 163 USPQ 644 (CCPA 1969).

A timely filed terminal disclaimer in compliance with 37 CFR 1.321(c) may be used to overcome an actual or provisional rejection based on a nonstatutory double patenting ground provided the conflicting application or patent is shown to be commonly owned with this application. See 37 CFR 1.130(b).

Effective January 1, 1994, a registered attorney or agent of record may sign a terminal disclaimer. A terminal disclaimer signed by the assignee must fully comply with 37 CFR 3.73(b).

3. Claims 1-18 (apparatus) and claims 19-24 (method) are rejected under the judicially created doctrine of obviousness-type double patenting as being unpatentable over claims of U.S. Patent No. US 6,802,215 to Boucher et al. Although the conflicting claims are not identical, they are not patentably distinct from each other because the instant claims more broadly claim the invention disclosed in Boucher et al., that is, a measurement tool, and a method comprising: providing a measurement tool employed in downhole drilling operations and conditions.

Art Unit: 2856

Conclusion

4. The prior art made of record and not relied upon is considered pertinent to applicant's disclosure. Patton et al., Tanguy et al., Frink et al., Jardine, Holbrook et al., Harrell et al., Airhart et al., Dubinsky et al., Dublin, Woloson et al., Dodson, Krueger et al., Wassell, Obrecht, Wachtler et al., Das, Hebel, Maron and Gabler et al. all teach various placements of strain gages within cavities on downhole tools to measure the weight-on-bit or torque-on-bit to properly measure axial and other strains associated with the pressures induced in downhole environs.
